

# PHEMI Central Big Data Warehouse

## Collect, Curate, and Consume Your Data with Privacy, Security, and Governance

PHEMI Central is a new class of data warehouse that uses big data technologies to allow your organization to collect, curate, and consume of any volume and variety of data, while meeting, at scale, your organization's standards for data management, privacy, and governance.

Other big data platforms make use of Hadoop's distributed file system capabilities. But unlike conventional Hadoop platforms, PHEMI Central is a fully integrated solution that integrates the Hadoop ecosystem with industry-pioneering privacy, security, and governance features and sophisticated indexing, cataloguing, and data management features—integrating the power of big data with research and business analytics and enterprise information management.
